

Skater Shawn and his friends were hungry, so they decided to go eat some pizza.

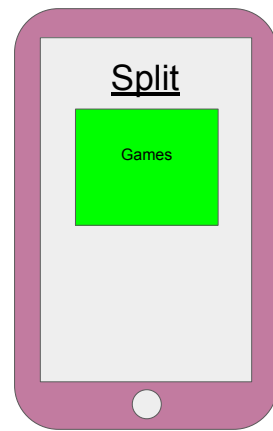

Skater Shawn and his friends sit down at the best pizza spot in two to enjoy a large pepperoni pizza. They also got drinks and chips with the order.

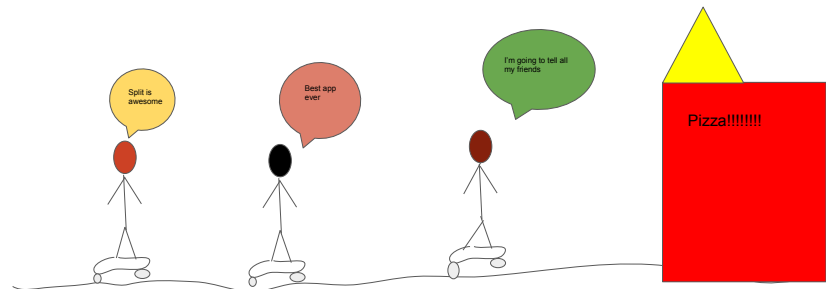

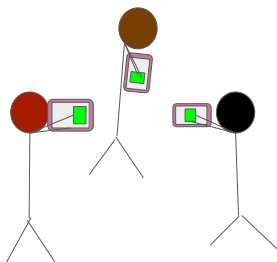

After they ate, the bill arrived and there was some confusion on how the check should be split.

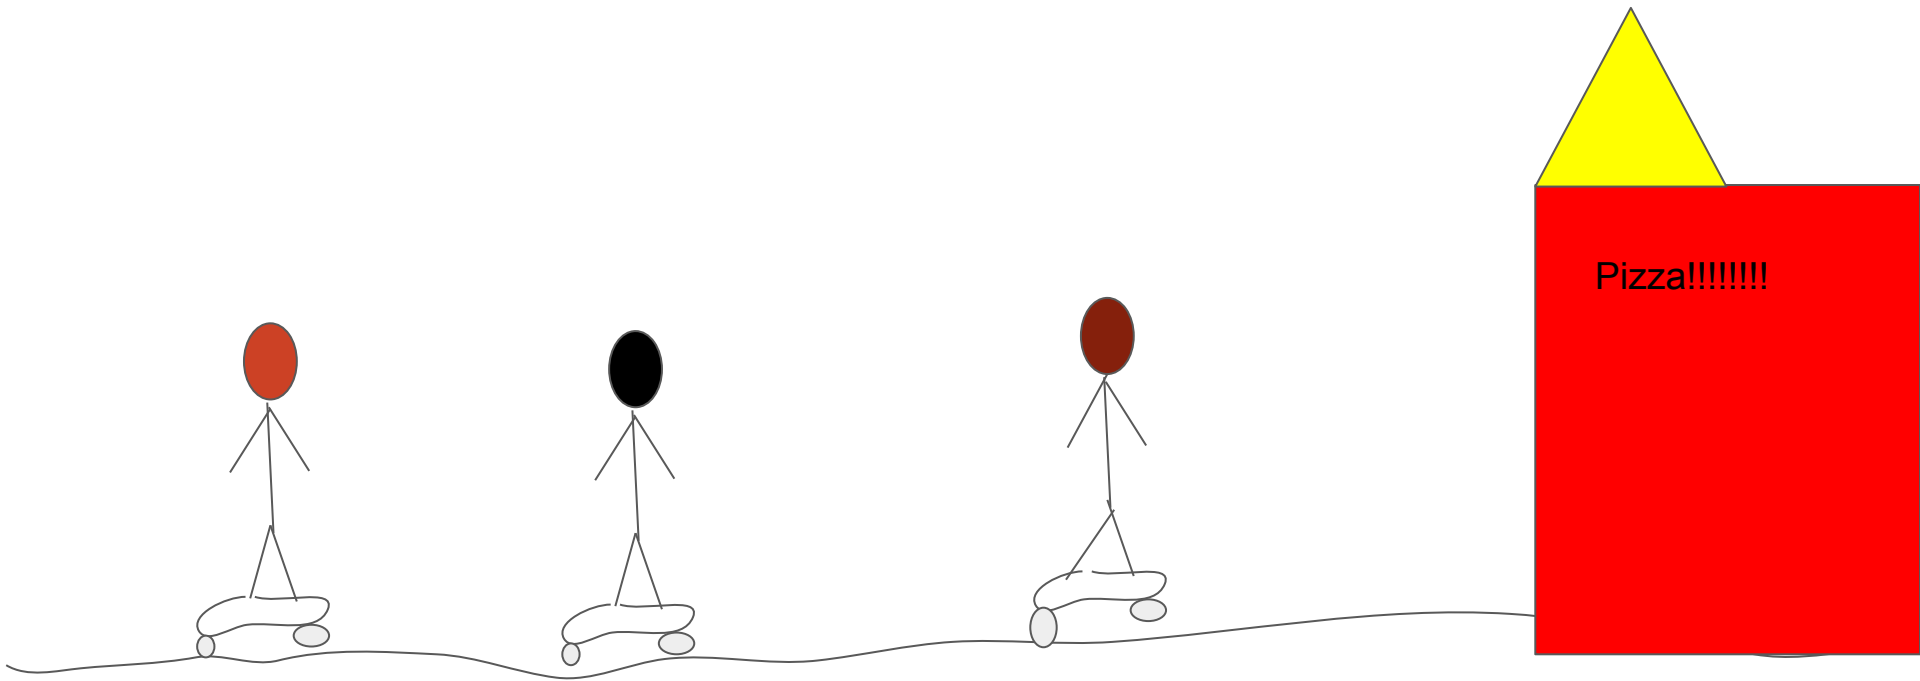

Skater Shawn remembered a app called Split. It's an app where a group of people can go into a game, and it decides how a check could be split up. He pulls out his phone and opens the app. He tells his friends about the app, and they agree to play the game.

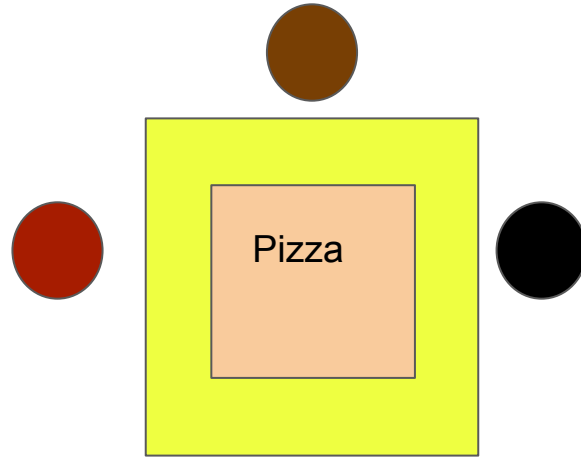

Shawn and his friends play the game provided by Split and decide how the bill is going to be paid.

They paid the bill using Split and left the pizza place with a full stomach and excitement.

Tom Jabroni needs a way to easily split the check with his non tech savvy group of friends

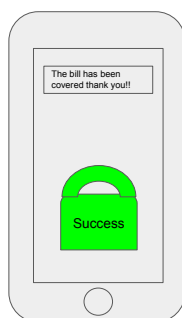

Tom opens the app and creates a group payment with friends using their usernames or a group they have created

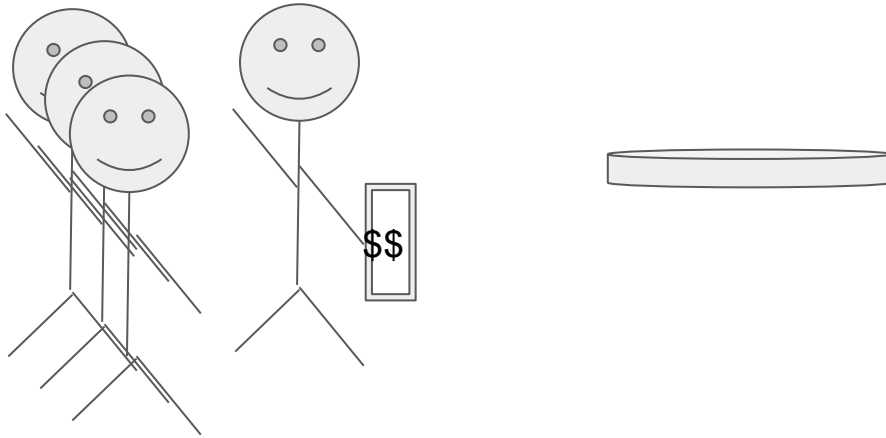

Tom found this new app that lets him do just that, but his friends aren't so sure that it is safe, luckily it offers financial security as well as insured payments

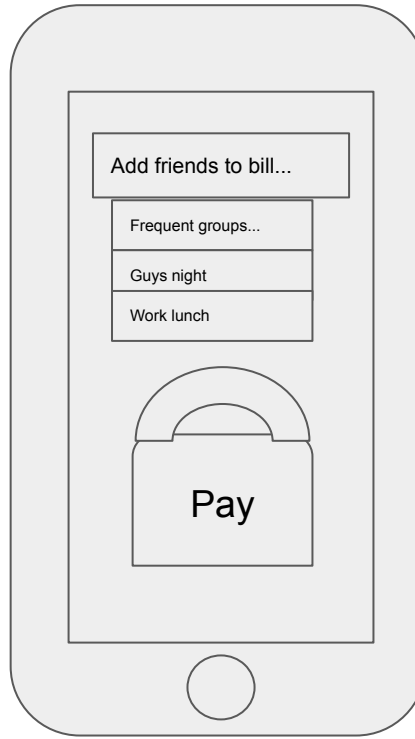

With only a few clicks of a button all of Tom's friends are able to pay the check based on what they owe

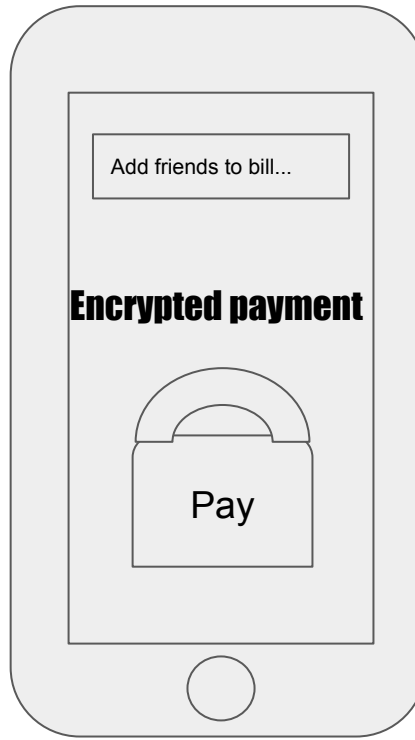

Now that everyone has paid separately the bill has been covered and they guys don't have to worry about paying another person back

Bob helps set up family reunions every year. His family always plans to eat at a nice restaurant every year.

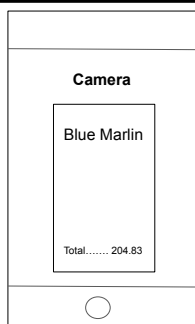

Bob used to be a server, and knows how stressful the job can be. Last year they split the check 12 ways, and he could tell it was very stressful for the server.

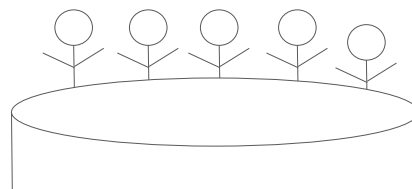

Bob has his family download our app before they go out to eat.

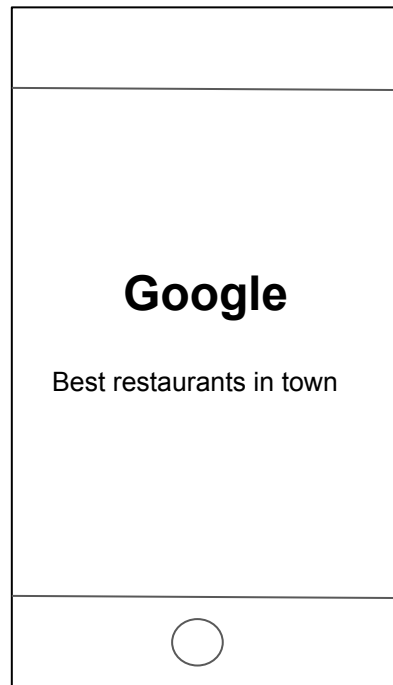

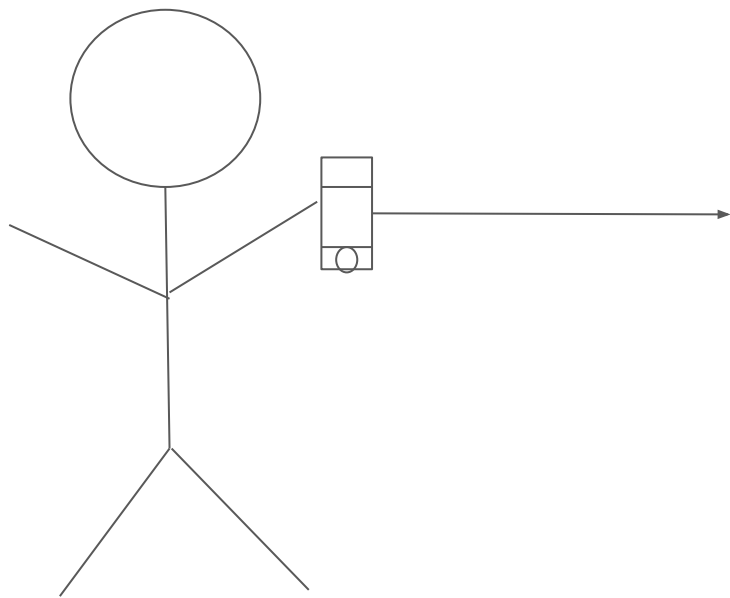

He asks the server for one check, and he pays it with his credit card.

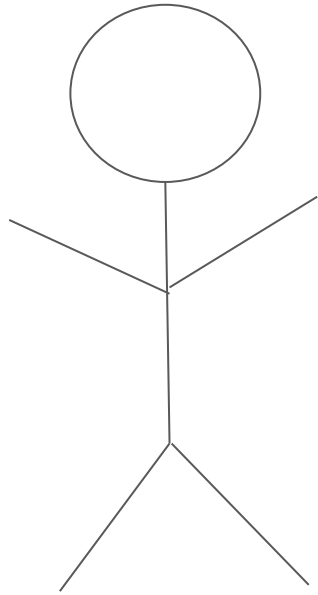

He takes a picture of the receipt, and all of his family members claim their meal and the app automatically Venmos Bob the amount that they owe.

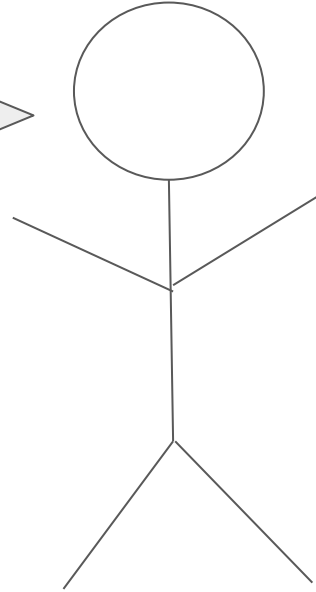

Bobs family meal was less stressful than trying to individually Venmo him, and the server was less stressed splitting the checks.

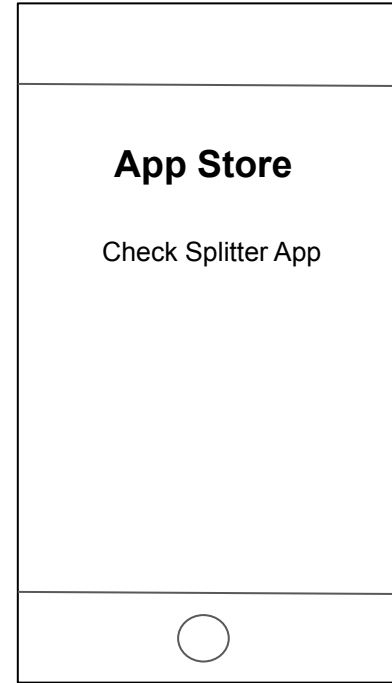

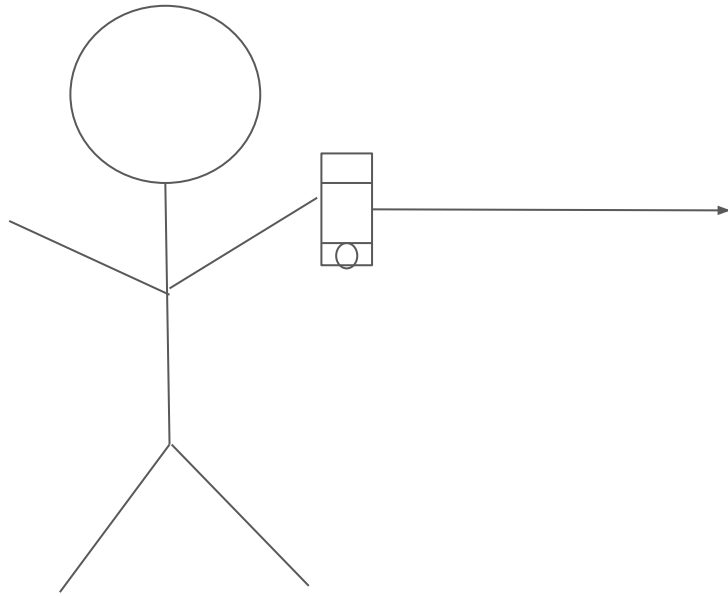

Bob helps set up family reunions every year. His family always plans to eat at a nice restaurant every year.

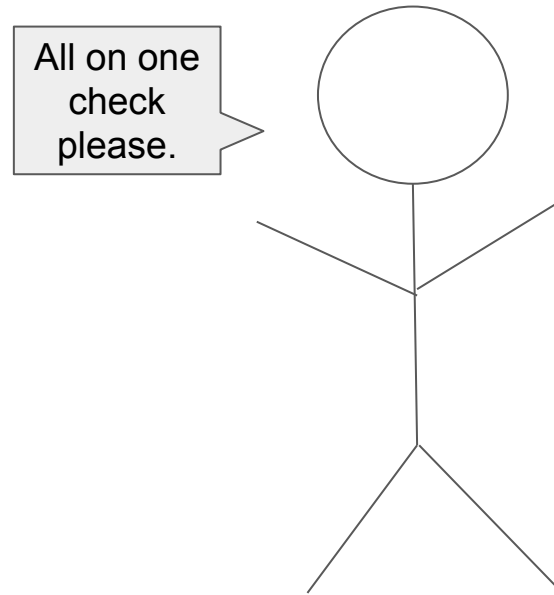

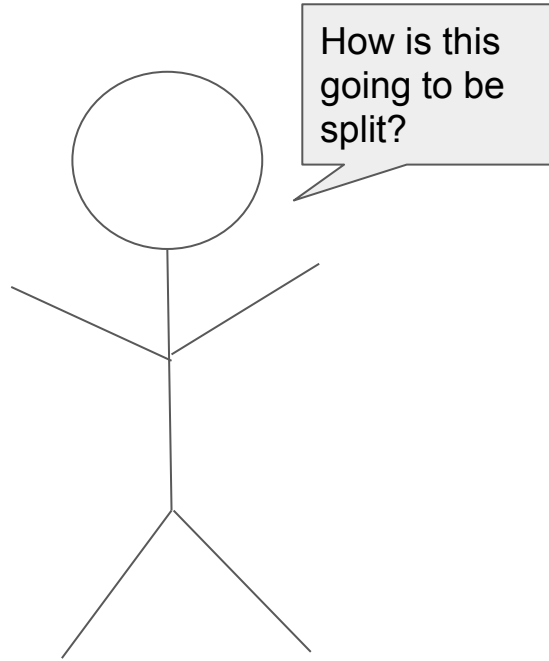

Can you split
the check 12
ways please?

Bobs family meal was less stressful than trying to individually Venmo him, and the server was less stressed splitting the checks.

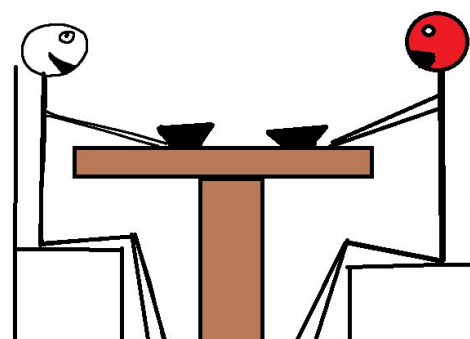

Ronaldo is a very busy guy and is only able to make it out for dinner or lunch with his friends once or twice a week. When he goes out he often finds it inconvenient paying for lunch if he forgot to tell the server they are paying separate, adding more strain to his already busy day.

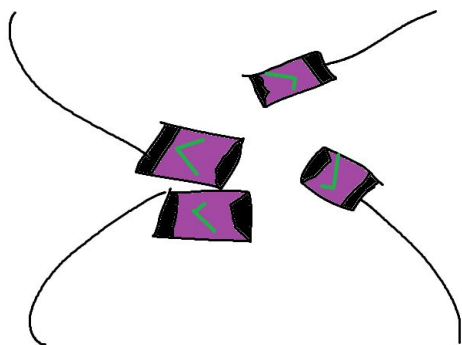

One day at work, Ronaldo heard from a coworker about a new app for splitting bills out at restaurants and stores so he gets the app and sets it up.

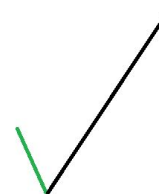

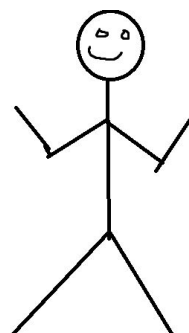

Later that week, some of Ronaldo's old high school friends want to go out for dinner to a new restaurant that just opened up not too far from him. Ronaldo agrees and tells his friends about this new app he got and wants them to get it as well so they can try it out.

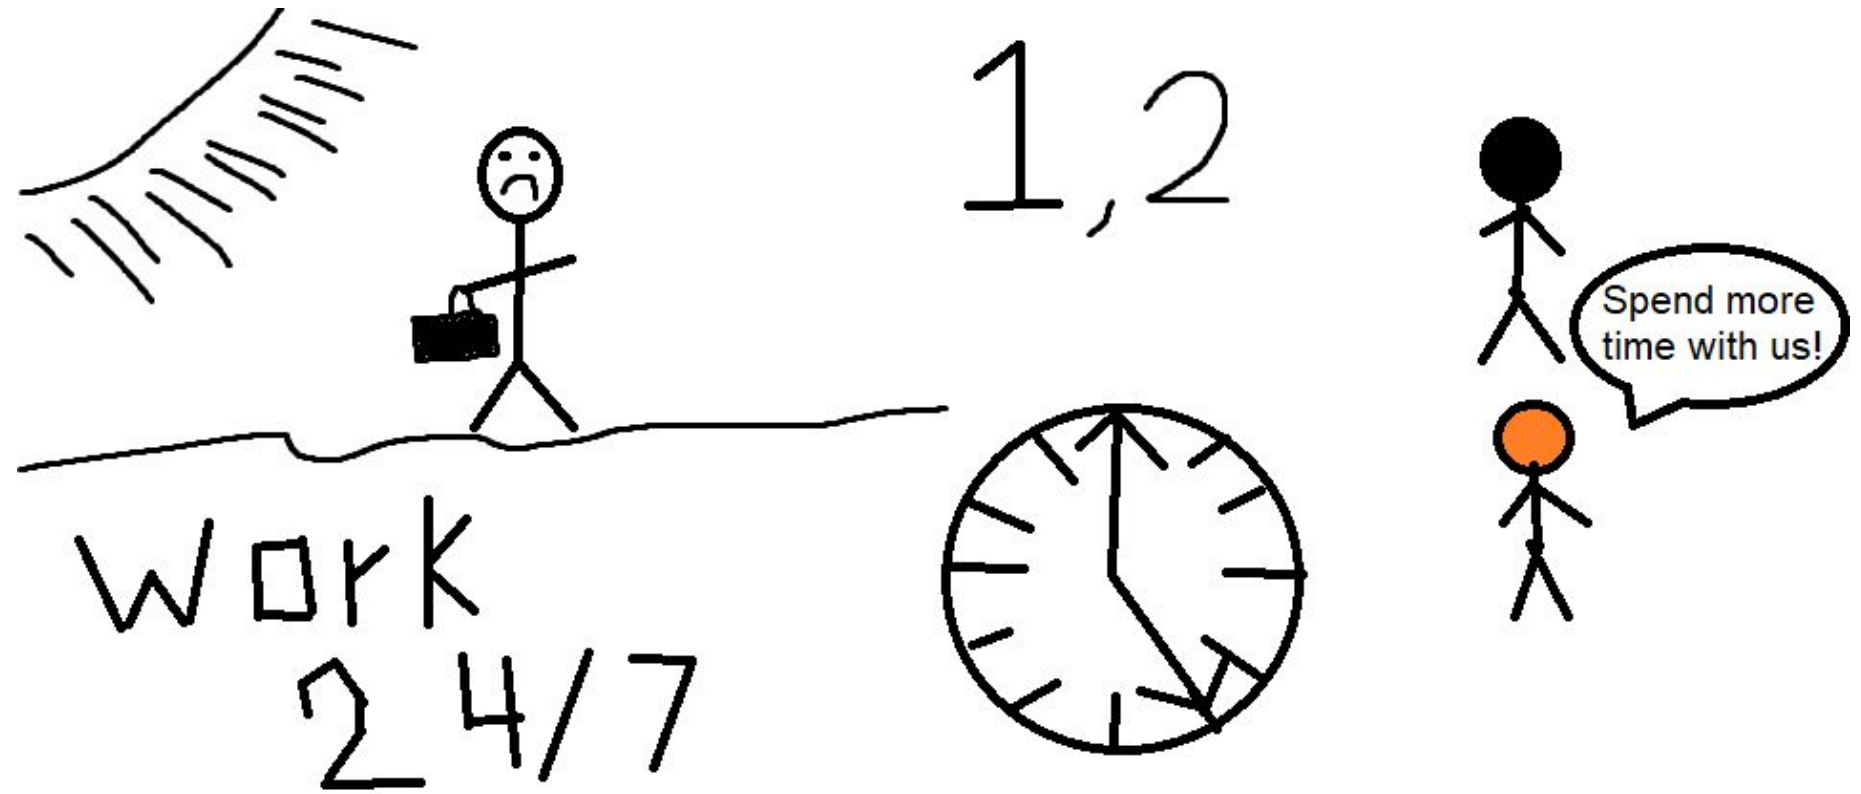

The workday is finally finished so Ronaldo meets up with his friends at the restaurant and they enjoy their meal.

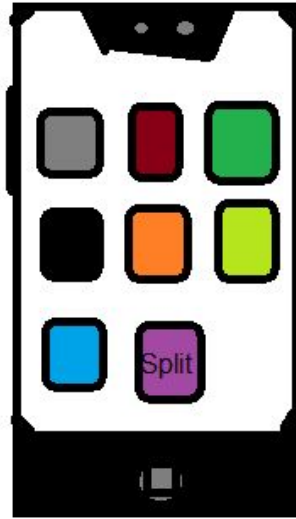

He and his friends use the app to split the payment and put it onto one card the server can scan just one card. The get out of the restaurant quickly and now have a little more time to spend together before Renaldo must retire for the night to get ready for another day of work tomorrow.

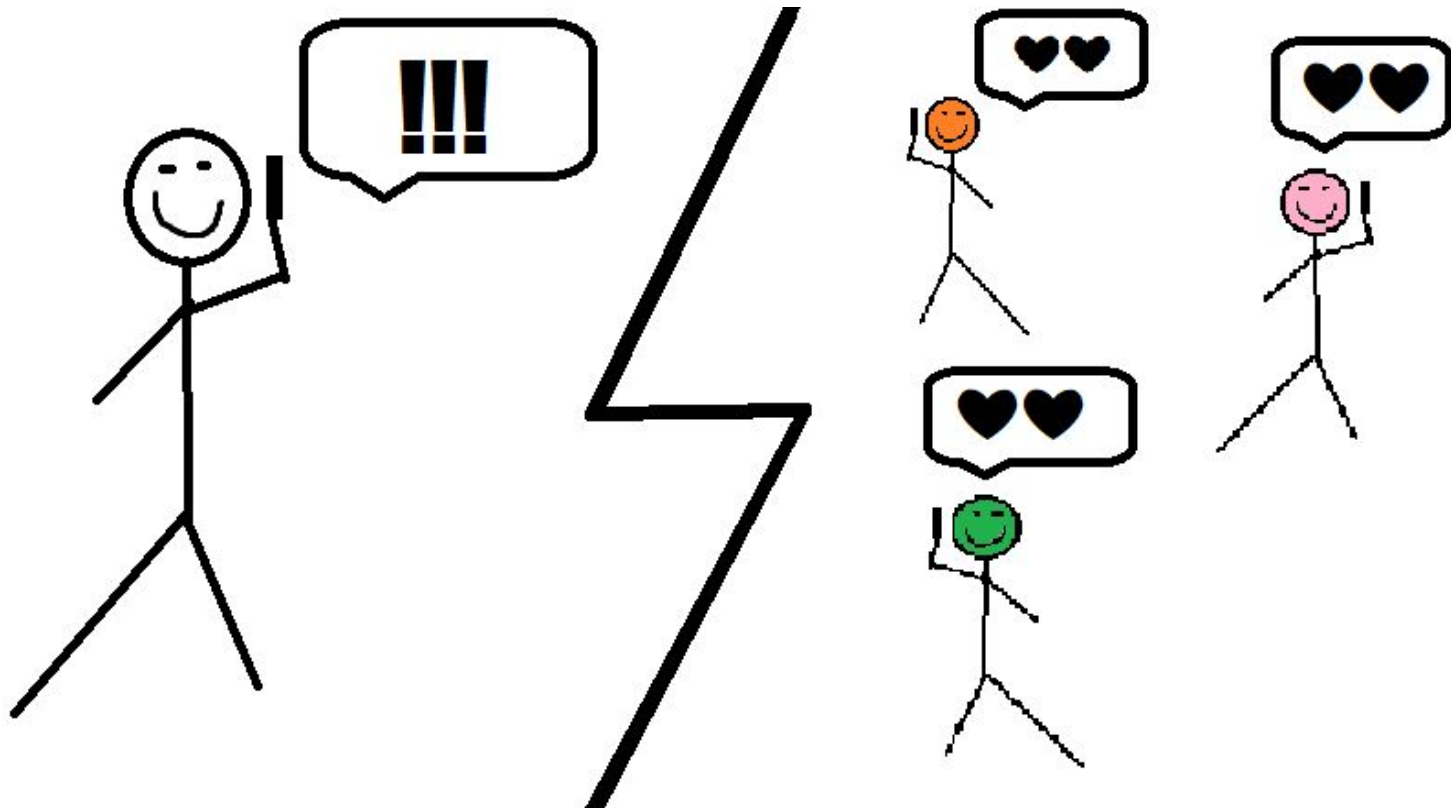

Ronaldo enjoyed the app and will use it again for his next time out!
